This document summarizes solar power generation from solar energy. It discusses that solar energy comes from the nuclear fusion reaction in the sun. About 51% of the sun's energy reaches Earth's atmosphere. There are two main technologies for solar power generation: solar photovoltaics and solar chimney technologies.

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system. PV systems can also be installed in grid-connected or off-grid (stand-alone) configurations. The basic components of these

Solar power is a type of renewable energy that we harness from the sun. The most common type of solar power technology most of us are familiar with is photovoltaic, which uses sunlight. Solar panels rely on the photovoltaic effect to produce electricity. But there is a second type of solar power - concentrating solar-thermal power or CSP.
