

What is a network design foundation course?

This network design foundation course introduces the basics of electricity distribution, the components, and the language of LV distribution networks before considering how these components are put together to produce a safe, reliable and economically viable LV distribution network.

What can I learn in a network design workshop?

The core concepts are reinforced through network design exercises using both hand calculations and software planning tools, enabling delegates to: Understand how to configure power flow analysis tools in terms of slack bus, customer loads and generation. Complete basic network studies required to determine compliance with GB standards.

What are the key considerations for distribution network design?

It outlines key considerations for distribution network design like meeting customer needs through good service and minimizing supply chain costs. Different distribution network designs are presented, including direct shipping from manufacturers, distribution through warehouses, and retail stores.

What is included in a network design course?

Fault Level, Voltage and Network Capacity Planning are all considered along with supporting knowledge in the areas of earthing design, basic HV protection and typical HV supply connection arrangements. The core concepts are reinforced through network design exercises using both hand calculations and software planning tools, enabling delegates to:

How are distribution networks evaluated?

It explains that distribution networks are evaluated based on customer needs met and costs. The number of facilities impacts response time, inventory costs, transportation costs, and facility costs. Inventory and transportation costs initially decrease then increase with more facilities, while response time improves.

What factors influence distribution network design?

Effective sourcing decisions use supplier scoring, contracting, auctions or negotiations to improve supply chain profits through strategies like design collaboration, risk sharing, and performance incentives. This document discusses factors that influence distribution network design.
