Here is a stepwise description of how to install solar panels on the roof: Step 1: Identify the Roof Space ... you can specify the extent of shade-free area. Step 2: Inquire the Roof Condition . Ascertain the endurance capacity of the roof, as the solar panels are bound to weigh heavy on it. ... Ensure Proper Arrangement of Panels . Solar ...

Rooftop solar converts sunlight into electricity, using solar photovoltaic (PV) panels that are positioned toward the sun. They work by harnessing light energy (photons) to produce an electric current. Solar PV panels can be installed on the roof of your home, garage, or even in your yard -- wherever they will capture the most sunlight.

The most ideal roof for solar panels has an inclination of between 40 to 30 degrees. East and west-facing roofs will still work but it is not generally recommended to install solar panels on a north-facing roof. Solar panel systems facing east or west can still work well but they may get around 15-20% less energy than one facing directly south.
