How do solar panels connect to a house?

Solar panels are connected to your house in two ways: an electrical connection and a mechanical connection. Here's how both of these work, and what it means for your house. Your installer will connect the solar panels to the inverter through a series of wires that will travel through your roof.

Can you put solar panels on a wall?

But most wall-mounted panels are parallel to the wall, or only slightly tilted. It's also harder to fit as many solar panels on a wall as you would on a roof. A typical three-bedroom house can fit around 10 350-watt (W) panels on its roof, whereas a wall will only fit around two or three panels.

A Wall. A wall-mounted solar panel may be your best option, especially if you opt for a smaller panel like a 100W rigid solar panel. If you have a wall that receives significant direct sunlight during the day, wall mounting may be a good option and can augment a rooftop PV array. [How to Mount Solar Panels Yourself](#)
