Solar panel efficiency. Solar panel efficiency is determined by testing panels at Standard Test Conditions (STC), using a temperature of 25°C and an irradiance of 1,000 W/m² - the equivalent of a sunny day with incident light hitting a sun-facing surface tilted to 37°. A solar panel efficiency of 15% with a 1m² surface area would produce 150 Watts under these test conditions.

This tax relief covers both the supply and installation of solar panels when performed by a single contractor, or just the installation costs if homeowners choose to purchase panels separately.
