Should you remove solar panels when not generating power?

Cover the Solar Panel: Even though you should disconnect solar panels at hours when they are not generating power, you should always try to cover them with opaque cloths before removing them. Doing this will ensure no solar generation, making it safer to disconnect the modules.

What software do you use for solar drawings?

Autocad edited by Autodesk is probably the most commonly used software for drawings in the solar industry, either for layout, mechanical or electrical drawings. Here are some tips and explanations to help you with your Autocad drawings.

A 6V solar panel is used to build this simple night lamp powered by solar energy. It gets charged during the day and is built to turn on automatically at sunset. The LED is then powered by the battery and stays on until the morning. This person also suggests putting the bulb in front of a mirror or reflective item so it increases the light.
