What is home battery storage?

It involves the installation of a home battery, designed to store energy to power your property cheaply and cleanly. You'll no doubt have lots of questions before investing in a home battery. So, we've prepared a handy guide to help you get started on your domestic battery storage journey.

Should I install a home battery system if I have solar panels?

Absolutely. Home battery systems offer numerous benefits, including energy independence, reduced electricity bills, and backup power during outages. Installing a Qcells energy storage system can maximise your energy savings, regardless of whether you have solar panels or not.

How does a home battery storage system work?

An installer would simply come and fit your domestic battery storage system, adding an AC coupled inverter to communicate between solar PV, the battery, and the home. So, the power from your existing solar array will charge the battery, the battery will supply the home, and any leftover energy is sent back to the grid.

Can a domestic battery storage system work without solar PV?

A domestic battery storage system will still work effectively without solar PV or a turbine in place. Here, the storage battery can work strategically with smart energy tariffs. It will charge using off-peak rates (usually overnight) - meaning you store energy only when it's super cheap to do so.

From 1 February 2024, you won't pay any VAT on batteries for solar panels (previously you had to pay 20% VAT, unless you bought it as part of a solar panel system). So now you can install a standalone energy storage battery or add one to your existing solar PV system, and you'll pay 0% VAT. From 1 April 2027, this is set to increase to 20% VAT.
