

Indoor solar water tank bracket

Does solariskit have a hot water storage tank?

Like any solar hot water system, the SolarisKit solution also has an insulated hot water storage tank. The tank stores the heat collected by our solar collectors so it's ready to be used when you need it. SolarisKit can provide tanks of any size with 180L, 250L, and 300L being our most common.

Can a solar hot water system be installed on a tiled house?

We can provide you with solar hot water systems designed for a family home. This offers complete solar thermal systems ready to fit onto the roof structure of any tiled house. Each kit will contain equipment parts enabling connection to an existing domestic hot water cylinder or if required please contact us for the latest thermal stores.

How does the solariskit solar hot water system work?

The SolarisKit solar hot water system includes our own solar controller which monitors the temperature of the system. When it detects the solar collectors are warmer than tank water, it switches on the pump to start collecting heat. The process is fully automatic, just plug it in, switch it on, and it takes care of the rest!

What is included in a solar hot water system package?

Included in the package are flat plate collectors, roof fixing kits to match your tiles, flexible stainless steel tube and connections for both ends. The pumping station included is with built-in controller and safety equipment. Complete and ready for assembly. All prices for solar hot water systems are available through this page link

What size solar heating system is right for Your House?

To find out what size of the solar heating system is right for your household, first calculate how much hot water you actually use daily. For example: Small Households: Typically need a system that can provide between 150 and 200 litres of hot water per day.

Does solariskit provide carbon free hot water?
