Can solar panels be installed on corrugated sheet metal roofing?

When installing solar PV generation systems on corrugated sheet metal roofing products, consideration must be given to preserving or enhancing the existing condition of the roof. There are four main areas that deserve the attention of a professional solar installation team:

How do solar panels mount on a metal roof?

A mounting system is a device that allows you to attach solar panels to your roof, safely and securely. When it comes to installing solar panels onto a metal roof, our team use a mini rail system, that is drilled onto the ridges of the metal roof via self-tapping screws.

Are thin-film solar panels a good fit for a metal roof?

The solar industry is always cooking up something new, like thin-film panels that could be a perfect match for your metal roof. These innovations are making solar more adaptable and efficient than ever. Pairing solar panels with your metal roof is a smart move, environmentally and financially.

Is my metal roof suitable for solar panels?

If you are wondering if your metal roof is suitable for solar panels, in most instances the answer is yes. Solar panels and metal roofing are a great combination to help maximise the energy efficiency of your home or business.

Can PV panels be mounted on a metal roof?

All of the PV panels are permanently attached to the south facing pitched roof. Standing-seam metal roofs are partially flat, so mounting a rack is not a problem. The roof on my house is corrugated metal and therefore has no flat surfaces for the aluminum mounting brackets to seat.

How do you install solar panels on a roof?

Opt for clamp-based mounting systems. These clamps attach to the seams of the roof, ensuring a secure fit without any penetrative drilling. Ensure the solar panels are tilted at an angle optimal for your region to maximise energy absorption. This often means aligning them towards the equator and considering the seasonal sun angles.
