To maximise energy absorption, you need to make sure to install the wall-mounted systems strategically. You can do this by placing the solar panels directly parallel to the wall, tilting them away from the wall or overhanging them. The natural slope of wall-mounted solar panels requires special mounting hardware to ensure security.

Do wall-mounted solar panels produce more electricity?

Wall-mounted solar panels produce less energy than roof and ground-mounted solar panels depending on where you live. In general, wall-mounted solar panels generate more electricity during the winter months than they do in the summer. This is because the sun is lower in the sky, allowing more direct sunlight to hit wall-mounted panel angles.
