What is a roof mounted photovoltaic system guidance?

The guidance refers only to the mechanical installation of roof mounted integrated and stand-off photovoltaic systems; it provides best practice guidance on installation requirements and does not constitute fixing instructions.

How much does a flat plate solar thermal panel weigh?

An appropriate system of mechanical lifting should be provided. Flat plate solar thermal panels can weigh up to 80 kg each when installing an integrated PV or solar thermal system, the underlay should always be checked for tears or other signs of damage and replaced as necessary.

Can a PV system be integrated into a flat roof?

In some cases, PV systems can be integrated directly into flat roofs (Figure 25), although this is not common because the efficiency of PV modules is reduced because the optimum angle relative to the sun is not achieved.

What are the requirements for a PV installation?

Virtually all domestic PV installations will fall under the scope of Part P. Part P requires the relevant Building Control department to be notified and approve the work. There are two routes to comply with the requirements of Part P: Notify the relevant Building Control department before starting the work.

What are the different types of PV installation?

There are two main types of PV installation: integrated into the roof surface, often referred to as Building-Integrated Photovoltaic (BIPV) systems or mounted above the existing roof covering, also referred to as stand-off systems.

How should a PV system be designed & installed?

From the outset, the designer and installer of a PV system must consider the potential hazards carefully, and systematically devise methods to minimise the risks. This will include both mitigating potential hazards present during and after the installation phase.

Best all-around: SunPower 110W Flexible Solar Panel. The reason SunPower's 110W flexible solar panel tops this list is its advanced IBC (interdigitated back contact) solar cells. Because all or most of the cell's front contact grids are located on the back, these cells are highly efficient at up to 25% -- even higher than some traditional rooftop monocrystalline PV modules!
