

What is the use and installation manual for Aurora photovoltaic inverter?

Use and installation manual Page (PVI-10.0/12.0-I-OUTD (-S)-400 Rev:1.3) INTRODUCTION This document is a technical description of the AURORA photovoltaic inverter; the aim of this document is to provide the installer and user with the necessary information regarding the installation, operation and use of AURORA.

How does an Aurora inverter work?

The Aurora inverter feeds a power grid by using the power generated from photovoltaic panels. The photovoltaic panels transform sun-radiated energy into electrical energy in the form of direct current (DC) through a photovoltaic field (also known as a PV generator).

How do I start the inverter?

Use and installation manual Page (PVI-10.0/12.0-I-OUTD (-S)-400 Rev:1.3) Start-up using the side button If DC voltage is not present but the AC grid is properly connected and you wish to start the inverter, press the side button shown in Fig. 18 for more than 2 seconds.

Can a photovoltaic system be implemented with a Aurora inverter?

Larger photovoltaic systems may be implemented by using several arrays connected to one or more AURORA inverters. **WARNING:** String voltage shall not exceed 600 Vdc for any reason, so as to avoid damage to the equipment. **NOTE:** A minimum input voltage of 200 Vdc is required for Aurora to start the grid connection sequence.

How many inverters can a photovoltaic system handle?

The AURORA is capable of handling 2 separate arrays. If the output of photovoltaic system exceeds the capacity of a single inverter, additional Aurora inverters can be added to the system; each inverter will be connected to an adequate section of the photovoltaic field on the DC side and to the grid on the AC side.

How do I connect my inverter to a photovoltaic panel?

The electrical power and signals wiring from the inverter to the AC Grid and to the photovoltaic panel are connected through the Switch Boxes described in Fig. 11 SB-01 - "DC Switch Box Layout" - using the access windows in pos "A" for the power cables and the windows in pos "D" for the signal cables.

The inverters are single-phase grid-connected PV string inverters without transformer, which can convert the DC power from the photovoltaic (PV) strings into alternating current (AC) power, and feed the power into the power grid. This document involves the product model: CSI-5K-S22002-E.
