This paper deals principally with the grid connection problem of a kite-based system, named the "Kite Generator System (KGS)." It presents a control scheme of a closed-orbit KGS, which is a wind power system with a relaxation cycle. Such a system consists of a kite with its orientation mechanism and a power transformation system that connects the previous part ...

One simplified structure of a kite-based wind system, referred to as kite generator system, is shown in Fig.1 and adapted in this paper. Simply stated, the concept of a KGS is to mechanically

Plotting Shapes using Coordinates. What are coordinates and how do we use them when plotting shapes?Coordinates are pairs of numbers that relate to the x or y axis of a coordinate plane. They are usually written within brackets and (0,0) is the origin.When plotting shapes on a coordinate plane, you need to read the pair of coordinates, knowing that the first number in the brackets ...
