What are the requirements for PV-inverter?

When using inverter comply with CEI 0-21: The total capacity of PV-inverter is more than 3KW and less than or equal 6KW, the inverter's displacement power factor is adjustable between 0.95 leading to 0.95 lagging, and do not need external SPI.

What is a PV string inverter?

The inverters are single-phase grid-connected PV string inverters without transformer, which can convert the DC power from the photovoltaic (PV) strings into alternating current (AC) power, and feed the power into the power grid. This document involves the following product models: CSI-3K-S22002-ED; CSI-5K-S22002-ED.

What is the function of SPS in a battery inverter?

Page 10 The SPS generates DC power supply needed for operation of the circuit of the inverter itself. The Discharger/Charger block converts battery voltage to high-BUS DC voltage or converts high-BUS DC voltage to low battery voltage. This block uses high frequency isolation technology. 4.

What are the four factors of an inverter?

There are four factors of the inverter: PV, battery, grid, and load. PV and load is the single direction, PV only uses for input, and load for output. Battery and grid is the bi-direction, cause the battery can be charged and also can discharge, grid can be input and output.

How to solve error 04 on inverter?

The controller will turn on the inverting module, it will output the voltage from 0V to 230V (phase to neutral). If the voltage couldn't reach 230V after a time, the inverter will give error 04. Error 04 is related to the INV board, and control board. Please replace the control board and INV board both, it will solve error 04.
