How many solar fuses do I Need?

If your solar array requires solar fuses, install them just before the positive (red) branch connector. Each solar panel will require an MC4 solar fuse. So, if you have three panels, you will need three fuses. Refer to the wiring diagram below to see where these solar fuses are installed. What Size Solar Fuse Do You Need?

What is a solar panel wiring diagram?

A solar panel wiring diagram (also known as a solar panel schematic) is a technical sketch detailing what equipment you need for a solar system as well as how everything should connect together. There's no such thing as a single correct diagram -- several wiring configurations can produce the same result.

Do I need a MC4 solar fuse?

Only SOME solar systems require MC4 solar fuses. Whether your system needs these fuses depends on how many solar panels are in your array AND how these panels are wired together (series or parallel). Here's a quick overview to help you determine whether or not you need a solar fuse. One panel only? No fuse Panels wired in series? No fuse

Do solar fuses earn a commission?

Though we may earn a commission, the price you pay always remains the same. Solar fuses are in-line fuses that protect the solar panels and source wires (the wires connected to the panels) when one of the panels experiences a short circuit. (Learn more about short circuits in solar arrays by scrolling down to Appendix A)

Do I need a fuse for my solar panels?

For instance, if you have one of our 40Amp charge controllers, we would recommend using an 40Amp fuse. The second fuse between your solar panels and charge controller is a little bit different to figure out. The size of this fuse is dependent on how many solar panels you have and how they are connected (series, parallel, or series/parallel).

Do solar panels need fuses & circuit breakers?

But fusing solar panels is a critical step that keeps you - and your loved ones - safe. Without fuses (& circuit breakers) your solar wires are exposed to over-current events, which can lead to the wires overheating and potentially catching on fire. Let's avoid this!
