PV Cell or Solar Cell Characteristics. Do you know that the sunlight we receive on Earth particles of solar energy called photons. When these particles hit the semiconductor material (Silicon) of a solar cell, the free electrons get loose and move toward the treated front surface of the cell thereby creating holes. This mechanism happens again and again and more ...

2 &#0183; Solar energy - Electricity Generation: Solar radiation may be converted directly into solar power (electricity) by solar cells, or photovoltaic cells. In such cells, a small electric voltage is generated when light strikes the junction between a metal and a semiconductor (such as silicon) or the junction between two different semiconductors. (See photovoltaic effect.) Small ...
