How do you maintain a solar inverter?

Here's a quick "solar inverter maintenance checklist" to aid in retaining your inverter's functionality. Ensure your inverter is placed in a cooler environment. This helps extend its lifespan by preventing overheating. Just like an air conditioner, the inverter needs fresh air.

What is a solar inverter?

The solar inverter is a crucial component of solar equipment that converts Direct Current (DC) to Alternating Current (AC), which is suitable for household appliances. When there are problems with a solar power system, customers may rely on a regular power grid supply without even realizing it.

How often should a solar inverter be replaced?

While solar panels are very durable and built to last for 20 to 25 years, the solar inverter needs replacement probably once every 10 or 12 years. It's also a bit more complicated to maintain and needs more oversight and inspections. So what are some tell-tale signs that something could be wrong with the solar inverter?

What happens if a solar inverter doesn't restart?

Usually, inverters restart after a solar power system problem or power grid issue, which can affect the solar system. However, if the inverter doesn't restart by itself, it may be necessary to get the system up again manually. Upkeeping a solar inverter is vital for it to function as expected. Here are some suggestions owners can follow:
