What is a photovoltaic cell?

Explore SuperCoaching Now The diagram above is a cross-section of a photovoltaic cell taken from a solar panel which is also a type of photovoltaic cell. The cell consists of each a P-type and an N-type material and a PN junction diode sandwiched in between. This layer is responsible for trapping solar energy which converts into electricity.

How does a photovoltaic cell convert solar energy into electrical energy?

A photovoltaic cell harnesses solar energy; converts it to electrical energy by the principle of photovoltaic effect. It consists of a specially treated semiconductor layer for converting solar energy into electrical energy.

What is a solar cell p-n junction diode?

A solar cell is basically a p-n junction diode. Solar cells are a form of photoelectric cell, defined as a device whose electrical characteristics - such as current, voltage, or resistance - vary when exposed to light. Individual solar cells can be combined to form modules commonly known as solar panels.

How does a photoconductive cell control led current?

The circuit in Fig. 20-16 uses a photoconductive cell to control the current level in an LED. The LED current is low when the ambient light level is low, because the cell resistance is high. The LED current is increased as a result of the decreased resistance of R C when the ambient light level is high.

What is a typical control circuit utilizing a photo conductive cell?

A typical control circuit utilizing a photo conductive cell is illustrated in Fig. 13.34. The potentiometer is used to make adjustments to compensate for manufacturing tolerances in photocells sensitivity and relay operating sensitivity.

What is photoconductive cell construction & working?

Thus, free electrons and holes (charge carriers) are created within the material, and consequently its resistance is reduced. This is known as the Photoconductive effect. The Photoconductive Cell Construction and Working is illustrated in Fig. 20-10 (a), and the graphic symbol is shown in Fig. 20-10 (b).
