

A microgrid, regarded as one of the cornerstones of the future smart grid, uses distributed generations and information technology to create a widely distributed automated energy delivery network.

Mark Feasel, president, Smart Grid, Schneider Electric. Mark Feasel, vice president of smart grid, Schneider Electric, offered insight in a recent interview leading up to Microgrid 2019, where Feasel will be a featured panelist. Move over oil and gas. Here comes electrification. Electricity use is on the rise.

The Smart MicroGrid based on renewable energies is attracting a great interest as a sustainable solution that provides a cheaper and more reliable alternative to the centralized grid while less environmental impact, and allowing access to electricity, especially for remote areas and the isolated communities of different natures (Industrial, Residential...etc.).

Today, the market for commercial and industrial (C& I) solar in sub-Saharan Africa appears positioned for rapid growth. The high-cost and poor-quality of grid power, declining solar energy costs, and the rise of energy storage are the primary factors contributing to this tipping point effect, according to a 2019 report from Bloomberg New Energy Finance (NEF).

A microgrid, regarded as one of the cornerstones of the future smart grid, uses distributed generations and information technology to create a widely distributed automated energy delivery network. This paper presents a review of the microgrid concept, classification and control strategies.

This paper presents a methodology for energy management in a smart microgrid based on the efficiency of dispatchable generation sources and storage systems, with three different aims: elimination of power peaks; optimisation of the operation and performance of the microgrid; and reduction of energy consumption from the distribution network. The ...
