Advantages of Solar Panels without Batteries. Using solar panels without batteries offers several advantages. Firstly, it eliminates the need for expensive battery systems, reducing the overall cost of implementing solar power. Batteries require regular maintenance and eventually need to be replaced, incurring additional expenses.

Without solar panels, you could use a battery to make the most of a time-of-use tariff by storing up electricity while it's cheap (overnight, for example) to use during peak times. But if you're at home during the day and already use a large proportion of the electricity you generate through solar panels, or divert surplus electricity to heat your water (for example), then a battery may ...

Battery storage allows you to store excess energy generated by your home's solar panels. Battery storage also allows you to charge these storage batteries with electricity from the grid during off-peak hours (usually at a cheaper rate with tariffs from the likes of Octopus) to use within your home during peak hours.
