

Solar power headphones

What is solar powered sound by exeger powerfoyle?

? World's First Self-Charging Wireless Headphones ? Welcome to the dawn of a new era with Urbanista Los Angeles, Solar Powered Sound by Exeger Powerfoyle with Infinite Playtime. Ground breaking solar cell technology in the head strap acts like photosynthesis, converting real and artificial light into power for a nonstop audio experience.

How do solar cell headphones work?

The solar cell material converts all forms of light into electrical energy, powering the product to play your favourite tunes for hours on end. Indoor and outdoor light from your surroundings is used to charge and power the headphones, which come in timeless black, sand and grey colourways for all genders and ages.

Are Los Angeles headphones solar-charged?

The beauty of the Los Angeles headphones is that you don't really have to think about it, and obsessing over leaving them to charge in the sun feels like it's missing the point. The headphones can be snug on larger heads. This small logo is the only visible indicator of their solar-charging abilities.

Are solar charging headphones worth it?

For the most part, the headphones' solar charging capabilities aren't something you need to actively think about. They'll automatically charge regardless of whether you're wearing them and listening to music or whether they're turned off (although software caps their solar charging at 90 percent to protect the battery).

Are solar-powered headphones a viable alternative to earphones?

Solar-powered headphones provide a convenient, eco and user-friendly alternative to earphones that charge from a plug socket. At a time of soaring energy prices, we have witnessed an increase in economic demand for non-grid-dependent appliances. This is reflected by the substantial growth of the wireless earphone and headphone market.

Are solar-powered headphones better than silicon-based solar panels?

While approximately only half as efficient as standard silicon-based solar panels of the same size in full sunshine, the titanium dioxide panels are, in addition to being significantly thinner, much easier and cheaper to produce. The solar-powered headphones still have a built-in battery that can power up to 80 hours of playback time.

Called RPT-02 SOL, the headphones feature a headband that incorporates a solar cell fabric called Powerfoyle, which transforms sunlight and indoor light into electricity. "Built in part from ...
