

Spray-painted photovoltaic bracket anti-scratch packaging

Can you spray paint solar panels?

Unlike traditional solar panels, it's extremely easy to scale solar paint - using the same spray gun, you can just spray a smaller or larger area. In contrast, to make a larger solar installation with traditional solar panels, you need more bracing, wires, panels, etc - requiring more time and finances to plan and install.

What is photovoltaic paint?

This is the idea behind photovoltaic paint, a radical new application for solar cells that is easy to apply, can be installed almost anywhere, and is cost-effective. Sounds like something in the distant future, right? Not quite.

What are spray-on solar panels?

Spray-on solar panels are solar cells that can be manufactured to be lighter, stronger, cleaner, and generally less expensive than most other solar cells in production today*. They are the first solar cells able to collect not only visible light but also infrared waves*. Spray-on solar panels are composed of this material.

Can solar paint be used on plastic?

First, as mentioned it is cheaper to produce than silicon solar panels. This means that, in the future, solar will be attainable to a broader audience due to the lower cost. Solar paint can also be applied to surfaces of almost any shape or size, and to numerous surface types including plastic, fabrics, and even car bodies.
