At the same time, microgrid technologies face new challenges under the background of the new era of electricity sector development.

Is micro-grid development a good idea in Asia Pacific?

Generation capacity from renewable energy sources is growing at an unprecedented rate in the Asia Pacific region. According to a recent report from Navigant Research, cumulative investment in microgrids across the region will total \$30.8 billion from 2014 to 2023. Development of micro-grid in China also has many advantages.

The best example relates to remote microgrids, where innovation continues to occur at a steady rate prompting the need for a new definition--that of an advanced remote microgrid. Defining an Advanced Remote Microgrid. Remote microgrids, especially in the circumpolar Arctic and some island nations, have been in existence for decades.
