3 Description of your Solar PV system Figure 1 - Diagram showing typical components of a solar PV system
The main components of a solar photovoltaic (PV) system are: Solar PV panels - convert sunlight into electricity. Inverter - this might be fitted in the loft and converts the electricity from the panels into the form of electricity which is used in the home.

A narrower power tolerance range is generally preferable to a wider one because it represents a more consistent panel operation. It should be noted that most crystalline solar panels on the market typically have zero negative power tolerance, meaning the panel may produce more than its rated power under standard test conditions, but not less.
