Should I bird proof my solar panels?

By Bird Proofing your Solar Panels,you can protect your Solar Panels and your Green Energy Investment. This can be done by simply installing a wire mesh,or Bird netting to the outside perimeter of your Solar Panels. This prevents pigeons from nesting under your Solar panels,without impacting the panels warranty.

Where to use solar panels?

Where to Use: Rooftop solar panel arrays Target Bird: Feral Pigeons Bird Pressure: All levels Installation: Wire mesh is bound to solar panels using patent-pending clips Expertise Level: Easy Usage: Solar panels are being installed on commercial and residential roofs across the UK.

How do I install a wire mesh screen?

STEP 1: Place clips every 18 inches. Slide the clip onto the edge of the panel support bracket. Slide as far outward as possible so the clip is all the way on the lip of the panel. STEP 2: Set the wire mesh screen in place. Make sure the fastener rod comes through the screen at an upward angle as to keep downward pressure on the screen.

What is a solar panel clip?

Solar Panel Clips are manufactured from U.V.-stabilized polycarbonate and have self-locking nuts that are adjusted by hand for ease on the roof Corner ties are stainless steel for both galvanized and stainless steel kits Where to Use: Rooftop solar panel arrays Target Bird: Feral Pigeons Bird Pressure: All levels

How do you install Galvanized mesh?

Installation Instructions The galvanized mesh is in 200 mm wide rolls and comes in 30 M lengths. Cut the roll into 1.6 M sections (or length of the longest side of a panel),it is much easier to work with shorter lengths. Bend up two to three squares of the mesh to about a 45 degree angle(see illustrations below).

Eco7 recommend a wire mesh system as a form of protection. The mesh is installed around the perimeter of the panel installation and prevents access beneath the panels, offering protection for your roof, cabling and solar panels.
